

Firewall Matchmaker

By answering the following questions, you will find the right firewall for your IT security in just a few seconds!

Please note that the following specifications refer to LANCOM R&S®Unified Firewalls with Full License, so that all Unified Threat Management (UTM) functions are available to you. If you are trying to decide between a smaller or a larger firewall, we recommend that you choose the larger firewall in the interests of scalability.

For an overview of hardware features and technical system performance can be found in the comparison table:

Notes

Whichever firewall you choose – every LANCOM R&S®Unified Firewall is a next-generation firewall “Made in Germany” featuring state-of-the-art UTM functions such as sandboxing, machine learning, and R&S®PACE 2 Deep Packet Inspection. Whichever way you decide, your data has the best possible protection. In addition to the LANCOM R&S®Unified Firewalls mentioned here, you can also opt for the virtual LANCOM vFirewall, which offers identical features to the hardware firewalls and which, thanks to its flexible license model, can “grow” with your demands for UTM performance and network size.

LANCOM Systems GmbH
